

Spreadsheet Cleanup Checklist

Use this checklist before sending a small CSV or Excel file to a client, teammate, accountant, or buyer.

For a narrow manual cleanup task, confirm scope first. Payment link after confirmation:

<https://paypal.me/yp1233/10USD>

Basic cleanup pass

Column names

Use clear labels such as Customer Name, Email, Payment Status, Amount USD, and Notes.

Duplicate rows

Check obvious duplicates by email, order ID, or another stable visible field.

Status values

Normalize mixed values such as paid, PAID, complete, and done into one consistent label.

Amounts

Format money columns consistently and keep the currency visible.

Readable delivery pass

- Freeze or highlight the header row if the file has many rows.
- Remove blank rows that split the table into fragments.
- Use short notes that explain the business meaning, not just abbreviations.
- Keep original intent visible; do not invent customer, payment, or tax data.
- Save the cleaned file with a clear name and date.

When a 10 USD cleanup fits

- The file is small enough to review quickly.
- The task is about visible formatting, structure, or obvious duplicate cleanup.
- The expected result can be described in one or two sentences.
- It is not accounting, tax advice, audit work, or data verification.
